

SCOTTISH CRIME CAMPUS

- **Product: betobar LV**
- **Industry: Data Center**
- **Client: Scottish Government - Scotland**

The Scottish Government relocated their crime fighting teams to a single integrated site to encourage the exchange of information and team working.

This major investment, including the installation a central data centre, involved the installation of a high volume of Switchgear, Transformers, Generators and ancillary plant, all of which was located within modules on the building's roof.

Due to the high load currents and remote and exposed nature of the site, Eta-com, as the premium manufacturer of encapsulated cast-resin systems, supplied in excess of 2 kilometers of LV busduct to the project.
